Don’t be Afraid to Confront Your Fears

You’re afraid. Admit it. We all face fears and anxieties every day, and the only way to overcome them and succeed is to recognize them upfront so we can confront them directly.

• Examine your fears by identifying them. Spend some time each morning asking yourself what might happen during the day that you’re afraid of—failure to reach the people you need to talk to, for example, or getting lost on the way to an appointment.

• Take preventive steps. Think of what you can do to prevent your fear from coming true. Maybe you just need to be persistent to get hold of people, for example. Be on the lookout for behaviors and thoughts that add to your fear, and train yourself to change your patterns of action and thinking.

• Learn from your fears. You’ll either succeed or fail. Either way, use the experience of confronting your fear to overcome new problems.

Thanksgiving’s Origins

No pie, but lots of other tasty food

The first Thanksgiving didn’t feature pies or cakes, because the Plymouth pilgrims had no ovens and a limited supply of sugar. But it may have included cranberries, which Native Americans used in a variety of foods (including pemmican, made from berries, dried venison, and melted fat) as well as for medicinal purposes.

So what was the “original” Thanksgiving really like? Although harvest feasts were common in what became known as the Commonwealth of Virginia throughout the 17th century, the Thanksgiving most Americans probably think of was held at the Plymouth Plantation in November 1621.

William Bradford, the governor of the plantation, organized a feast for colonists and their neighbors, the Wampanoag tribe, to celebrate a successful harvest. The harvest had thrived thanks in part to Squanto, a native of the Patuxet tribe who had learned English as a slave before returning to his native land. Squanto taught the pilgrims how to grow corn, catch eels and fish and avoid poisonous plants in the surrounding forest, as well as helping them to forge a relationship with the Wampanoag and its chief, Massasoit.

This first Thanksgiving lasted three days, and probably did feature wild turkey as well as venison supplied by the Wampanoag—but no football.

National Nurse Practitioner Week

November 8–14

National Nurse Practitioner Week is held annually to celebrate these exceptional health care providers and to remind lawmakers of the importance of removing outdated barriers to practice so that nurse practitioners will be allowed to practice to the full extent of their experience and education.

Sometimes we take our lungs for granted. They keep us alive and well and for the most part, we don’t need to think about them. That’s why it is important to prioritize your lung health.

Your body has a natural defense system designed to protect the lungs, keeping dirt and germs at bay. But there are some important things you can do to reduce your risk of lung disease. Here are some ways to keep your lungs healthy.

Don’t Smoke

Cigarette smoking is the major cause of lung cancer and chronic obstructive pulmonary disease (COPD), which includes chronic bronchitis and emphysema. Cigarette smoke can narrow the air passages and make breathing more difficult. It causes chronic inflammation, or swelling in the lung, which can lead to chronic bronchitis. Over time cigarette smoke destroys lung tissue and may trigger changes that grow into cancer. If you smoke, it’s never too late to benefit from quitting. The American Lung Association can help whenever you are ready.

Avoid Exposure to Indoor Pollutants That Can Damage Your Lungs

Secondhand smoke, chemicals in the home and workplace, and radon all can cause or worsen lung disease. Make your home and car smokefree. Test your home for radon. Avoid exercising outdoors on bad air days. And talk to your healthcare provider if you are worried that something in your home, school or work may be making you sick.

Minimize Exposure to Outdoor Air Pollution

The air quality outside can vary from day to day and sometimes is unhealthy to breathe. Knowing how outdoor air pollution affects your health and useful strategies to minimize prolonged exposure can help keep you and your family well. Climate change and natural disasters can also directly impact lung health.

Prevent Infection

A cold or other respiratory infection can sometimes become very serious. There are several things you can do to protect yourself:

• Wash your hands often with soap and water. Alcohol-based cleaners are a good substitute if you cannot wash.
• Avoids crowds during the cold and flu season.
• Good oral hygiene can protect you from the germs in your mouth leading to infections. Brush your teeth at least twice daily and see your dentist at least every six months.
• Get vaccinated every year against influenza. Talk to your healthcare provider to find out if the pneumonia vaccine is right for you.
• If you get sick, keep it to yourself! Protect the people around you, including your loved ones, by keeping your distance. Stay home from work or school until you’re feeling better.

Get Regular Check-ups

Regular check-ups help prevent diseases, even when you are feeling well. This is especially true for lung disease, which sometimes goes undetected until it is serious. During a check-up, your healthcare provider will listen to your breathing and listen to your concerns. If you need health insurance, learn more about your options.

Exercise

Whether you are young or old, slender or large, able-bodied or living with a chronic illness or disability, being physically active can help keep your lungs healthy. Learn more about how exercise can strengthen your lungs.
